DARK SKY TOURISM AUSTRALIA

DARK SKY LIGHTING

FOUR SIMPLE CHANGES FOR LODGING, PARKS AND BUSINESSES

GOLDEN RULE: *Right light, right purpose, right time.*

NO LIGHT

Unless it's needed

Turn it off

Reduce unnecessary lighting around buildings, paths, car parks and facilities.

WARM LIGHT

Keep it amber

Use warm, low-impact light

Choose warm white or amber (≤2200K) to reduce glare and protect wildlife.

DIRECTED LIGHT

Only where needed

Keep it focused

Direct light downwards to illuminate paths, entrances and key areas safely.

SMART LIGHT

Sensors • timers • dimmers

Use it wisely

Add motion sensors, timers or dimmers so lights are on only when needed.

WHY IT MATTERS

- ✓ Protect wildlife
- ✓ Save energy and costs
- ✓ Enhance visitor experiences
- ✓ Support dark sky tourism
- ✓ Meet park, council and sustainability goals

NEED HELP?

Talk to Marnie Ogg at Dark Sky Tourism Australia for practical advice, lighting plans, training and support for your property, business or destination.
